SUMMARY

Backend engineer with 7 years building distributed systems and RESTful microservices for fintech lending and e-commerce, currently on a loan disbursement platform moving funds for thousands of borrowers. Cut batch settlement processing from 6 hours to 40 minutes with an event-driven redesign and scaled Redis-backed APIs to 1,200 requests per second. Brings on-call ownership, mentoring, and close collaboration with product and risk teams.

TECHNICAL SKILLS

Languages: Java, Go (Golang), Python, SQL

Backend & APIs: RESTful APIs, gRPC, Spring Boot, Microservices, Event-Driven Architecture, RabbitMQ, Apache Kafka

Data: PostgreSQL, MySQL, Redis

Cloud & DevOps: AWS (EC2, S3), Docker, Kubernetes, CI/CD (Jenkins), Grafana, Prometheus

Practices: Distributed Systems, On-call & Incident Response, Code Review, Agile/Scrum

EXPERIENCE

Software Engineer II (Lending Payments Platform) | Finverse Technologies Mar 2022 – Present
Bengaluru, India

- Re-architected loan disbursement settlement from nightly batch jobs to an event-driven RabbitMQ workflow, cutting end-to-end processing time from 6 hours to 40 minutes (89%)
- Designed and built RESTful microservices in Java and Spring Boot for the loan disbursement service, handling payment transactions with idempotent retries and strict correctness checks
- Built a Redis caching layer for credit-score lookups, sustaining 1,200 requests per second and removing the database as a latency bottleneck
- Owned production services through on-call rotation, triaging incidents with Grafana dashboards backed by a PostgreSQL reporting replica
- Mentored 2 junior engineers through code reviews and testing practices, raising the team's review throughput

Software Engineer | CloudKart Retail, Bengaluru, India Jul 2019 – Feb 2022

- Developed order management microservices in Java processing 50,000 orders per day across distributed services
- Optimized MySQL queries and indexes for reporting workloads, improving report generation speed for operations teams
- Built Jenkins CI/CD pipelines that automated build, test and deployment to AWS EC2 with Docker
- Partnered with product managers in sprint planning to turn merchant requirements into technical designs

PROJECTS

Event-Driven Payments Processing Pipeline (In Progress) | Go, Apache Kafka, gRPC, PostgreSQL, Docker, Kubernetes

github.com/priyaraman/payments-event-pipeline

- Building three Go microservices that process payment events over Apache Kafka with idempotent consumers, retries and a dead-letter queue
- Exposing a gRPC ledger service backed by PostgreSQL, deployed to local Kubernetes with Prometheus metrics and Grafana dashboards

EDUCATION

B.Tech in Computer Science | PES University, Bengaluru | GPA: 8.4/10 2015 – 2019

CERTIFICATIONS

- AWS Certified Cloud Practitioner | Amazon Web Services | 2021
